PROFESSIONAL SUMMARY

Full-stack Software Engineer with production experience building Ruby on Rails and React applications, from fintech systems to AI-powered developer tools. Experienced in designing scalable REST APIs, integrating LLMs, implementing Retrieval-Augmented Generation (RAG), semantic search with pgvector, and deploying cloud-native applications. Passionate about building developer-focused software that combines traditional software engineering with modern AI capabilities.

TECHNICAL SKILLS

- **Backend:** Ruby on Rails, PostgreSQL, GraphQL, REST APIs, Firebase
- **Frontend:** ReactJS, TypeScript, JavaScript
- **Other Tools:** RAG, Ollama, pgvector, AI/LLM Integration, Google Gemini AI, Claude Code, OpenAI Codex, CI/CD, Datadog, Redis, Git, RSpec, Postman, Metabase, TablePlus, Docker, Github Actions, Kubernetes, Azure, Linear, RabbitMQ, Agile, Linux, SQLite

PROFESSIONAL EXPERIENCE

Junior Software Engineer

First Circle Growth Finance Corp. | September 2025 - February 2026

- Developed and deployed new features for an internal business verification and credit assessment platform supporting loan approval workflows.
- Debugged and resolved production issues affecting automated credit checks and document validation processes.
- Translated business and operations requirements into scalable backend solutions using Ruby on Rails and GraphQL.
- Worked with GraphQL APIs and TypeScript-based frontend components to enhance system functionality.
- Monitored application performance using Datadog and assisted in cloud deployments via Azure, Kubernetes, and Cloud66.
- Collaborated cross-functionally with credit and operations teams to improve platform efficiency.
- Contributed to sprint planning and cycle-based delivery in an Agile environment using Linear for task estimation and tracking.
- Collaborated with senior engineers across international teams to deliver production-ready features and align on technical best practices.

Business Owner

T42 Cafe Taguig | July 2018 - June 2024

- Managed full P&L operations, inventory systems, and marketing strategies for a profitable retail business.
- Led cost control initiatives and operational improvements to ensure long-term sustainability.

Store Supervisor

Cantinetta Espresso Concept, Inc. (Illy Cafe) | November 2011 - August 2017

- Supervised daily operations, staff performance, inventory management, and manpower scheduling.
- Led budget planning, financial reporting, and profit optimization initiatives, while executing local store marketing strategies to drive revenue growth.

PROJECT WORK

NTBK (Notebook) | Developer | [Repo](#)

Full-stack self-hosted note-taking platform with Markdown-native editing, AI-powered features, and semantic search. Built with React/TypeScript frontend and Ruby on Rails API backend.

- Built a document management system with full-text search (pg_search), tagging, file uploads (Active Storage), and a responsive 3-column workspace UI in React 19 + TypeScript with Devise?JWT?Google Oauth authentication.
- Integrated local AI inference via Ollama for RAG-powered chat with document summaries and semantic embeddings using pgvector.
- Engineered a Ruby on Rails API with service objects, background jobs, RSpec testing, and CI/CD via Github Actions.

Inkbound: Living Enchanted Diary | Developer | [Repo](#)

Full-stack React app that turns your browser into a dark-fantasy diary that actually talks back.

- Built a full-stack AI-powered interactive diary inspired by Tom Riddle's Diary from *Harry Potter*, featuring immersive parchment writing, animated ink effects, and persistent conversational memory.
- Developed a React 19 frontend with custom handwriting animations, a procedural Web Audio Engine, and integrated Google Gemini API to deliver an interactive, memory-driven user experience.
- Implemented local data persistence with SQLite, automatic JSON fallback, and an offline response engine to ensure the application remains functional without an AI connection.

Stock Trading App | Developer | [Repo](#)

Full-stack Rails application enabling registered users to execute simulated stock trades with real-time market data integration.

- Implemented Devise Confirmable for user authentication and email approvals, with notifications via Action Mailer.
- Integrated Alpha Vantage API and Rails caching for dynamic, efficient real-time stock data on the dashboard.
- Built end-to-end trading workflows with secure PostgreSQL persistence and responsive UI components.

Emergency Guide App | Developer | [Repo](#)

Rails-based emergency resource platform featuring AI-assisted responses and real-time disaster updates.

- Implemented user authentication with Devise, enabling personalized emergency checklists and contact numbers.
- Integrated OpenRouter (AI) and ReliefWeb APIs to deliver dynamic emergency guidance and real-time updates.
- Developed search and favorites features to improve user access to first aid information and resources.

Chat App (Slack clone) | Developer | [Repo](#)

React-based messaging platform integrated with a REST API for real-time team communication.

- Managed authentication and messaging flows using Axios and token-based API requests.
- Implemented secure email and password authentication for account access.
- Enabled creation and management of channels and direct messages for effective team communication.

EDUCATION

- **Full Stack Web Development**, Avion School 2025
- **Multimedia and Internet**, Informatics Computer Institute 2005 - 2007
- **AB Literature**, University of Santo Tomas 2001 - 2004
